

Bacterial physiology meeting in Copenhagen:

Major ideas

in quantitative microbial physiology

Past,
Present,
and Future

June 13-15, 2022. The Carlsberg Academy, Copenhagen, Denmark

FEATURED SPEAKERS:

Nathalie Balaban
Hebrew University of Jerusalem

Shila Banerjee
Carnegie Mellon University

Tanneke den Blaauwen
University of Amsterdam

William Donachie*
University of Edinburgh

Johan Elf
Uppsala University

Susan Gottesman
National Cancer Institute, NIH

Mathias Heinemann
University of Groningen

Terence Hwa
UC San Diego

Achilles Kapanidis
University of Oxford

Tsutomu Katayama*
Kyushu University

Roberto Kolter*
Harvard Medical School

Ákos Kovács
Technical University of Denmark

Petra Levin
Washington University

Gene-Wei Li
MIT

Søren Molin
Technical University of Denmark

Jens Nielsen
Bioinnovation Institute

Seungeun Oh
Harvard Medical School

Steen Pedersen
University of Copenhagen

Teuta Pilizota
University of Edinburgh

Yuichi Wakamoto
University of Tokyo

* Remote Attendance

SPECIAL GUESTS

Tove Atlung
Steve Cooper*
Philip Hanawalt*
Flemming Hansen
Charles Helmstetter*
Kaspar von Meyenburg
Elio Schaechter*
Conrad Woldringh
Arieh Zaritsky

MEETING ORGANISERS:

Suckjoon Jun, UC San Diego
Namiko Mitarai, UCPH
Kim Sneppen, UCPH
Sine Lo Svenningsen, UCPH

AIM OF THE MEETING:

Copenhagen was the cradle of quantitative microbial physiology, with the University of Copenhagen as the home of Ole Maaløe's laboratory. The field is enjoying an exciting renaissance – once again, researchers from all areas of the natural sciences are teaming up to discover fundamental principles underlying cellular function. This Copenhagen symposium brings together the generations of researchers who have brought about major developments in micro-

bial physiology and molecular biology, as well as interested students and junior researchers. The aim of the meeting is to support synergy in the international research community by illustrating historical as well as current state-of-the-art multidisciplinary approaches to understanding molecular and cellular strategies of unicellular life forms.
