Using EOF analysis to determine the impact of changing climate on baroclinicity in Scandinavia

Friday 25 March 2022 16:05 (1h 40m)

Use of EOF and SVD techniques to determine the relative importance of different atmospheric modes, using data of geopotential height, temperature, and others. The NCEP and ERA5 reanalyses are used for this and their results will be compared.

Field of study

Earth & Climate Physics

Supervisor

Peter Ditlevsen
