

# Gravity as a double copy of gauge theory

*Thursday, 11 August 2022 14:00 (45 minutes)*

Relations expressing gravity as a “double copy” of gauge theory appeared first in string theory, and have been used to compute scattering amplitudes in theories of gravity, with applications to both theory and phenomenology. I will discuss how the double copy extends to a class of solutions to the equations of motion, including our best known black hole spacetimes, and how this story connects to the original story for scattering amplitudes.

**Presenter:** MONTEIRO, Ricardo
