# INTRODUCTION

# Polycrystal characterisation

Single Crystal

Multicrystal

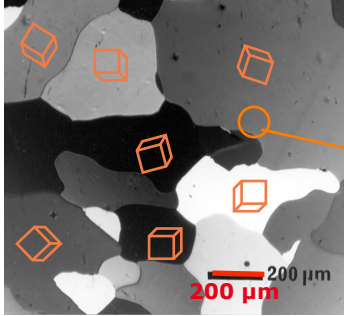

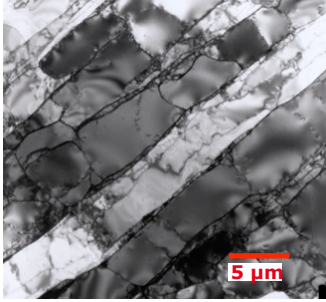

Powder

**DTU**

## Application to (metallic) materials science

Traditional Microscopy is 2D

Problems:

- Objects are 3D
- Limited statistics, heterogeneity
- Cannot predict the dynamics

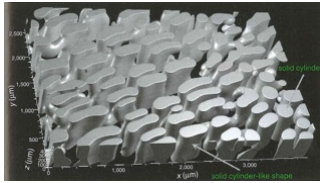

5 **Risø DTU, Technical University of Denmark**
Jette Oddershede jeto@fysik.dtu.dk 22-aug-2012

**DTU**

## Microstructure visualisation

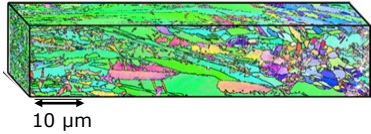

Sectioning + optical microscopy

Sample 1cm, Res: 2 μm

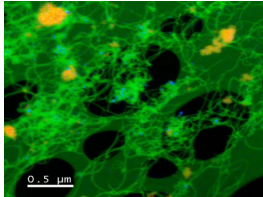

FIB+EBSD

Sample 20 μm, Res: 30 nm

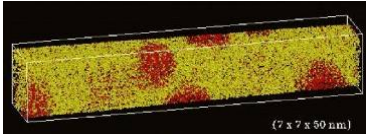

TEM tomography

Sample 500 nm. Res 5 nm

3D Atom Probe

Sample 30 nm. Res 1 Å

6 **Risø DTU, Technical University of Denmark**
Jette Oddershede jeto@fysik.dtu.dk 22-aug-2012

## X-rays - a complementary tool

- Non-competitive
  - Spatial resolution
  - Diffraction does not give direct imaging
- Benefits
  - Non-destructive
  - Fast = dynamics
  - Strain
  - 50-80 keV = high penetration = bulk grains

7 Riso DTU, Technical University of Denmark

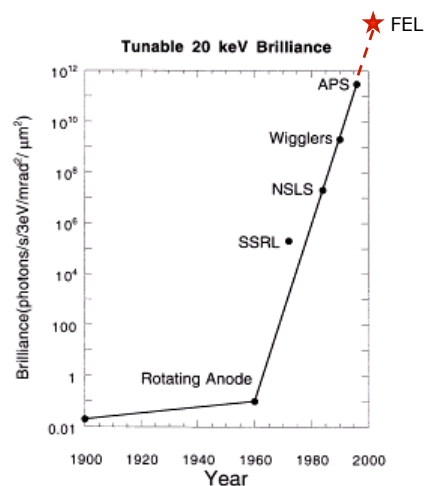

Jette Oddershede jeto@fysik.dtu.dk 22-aug-2012

## X-rays Synchrotron radiation

- High flux
- Low angular divergence
- Tunable wavelength

8 Riso DTU, Technical University of Denmark

Jette Oddershede jeto@fysik.dtu.dk 22-aug-2012

**DTU**

## 3DXRD SETUP

9 **Risø DTU, Technical University of Denmark**
Jette Oddershede jeto@fysik.dtu.dk 22-aug-2012

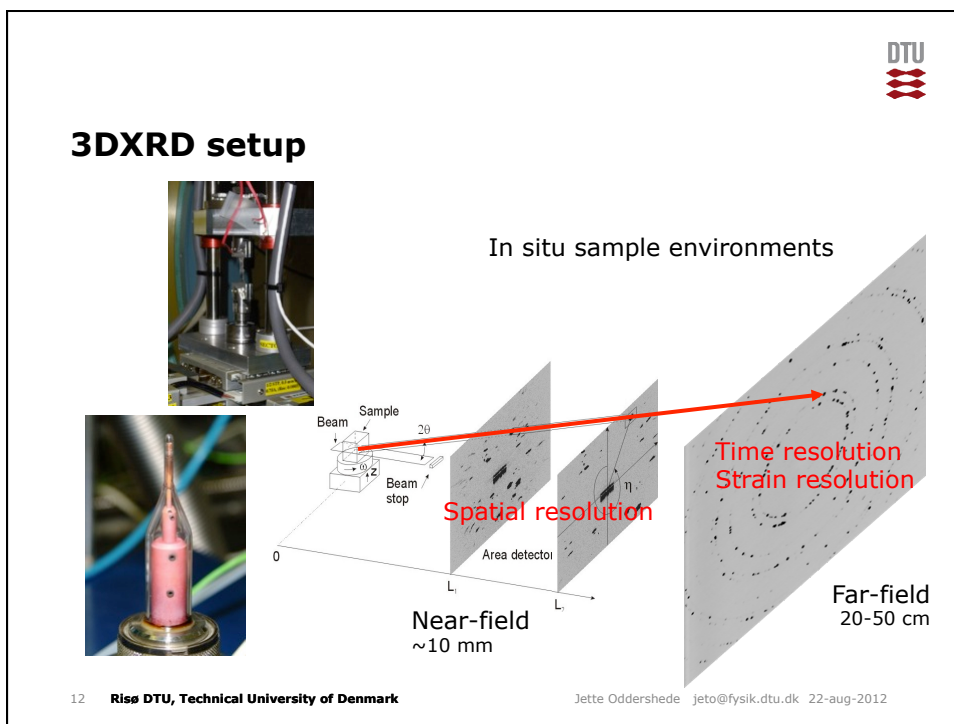

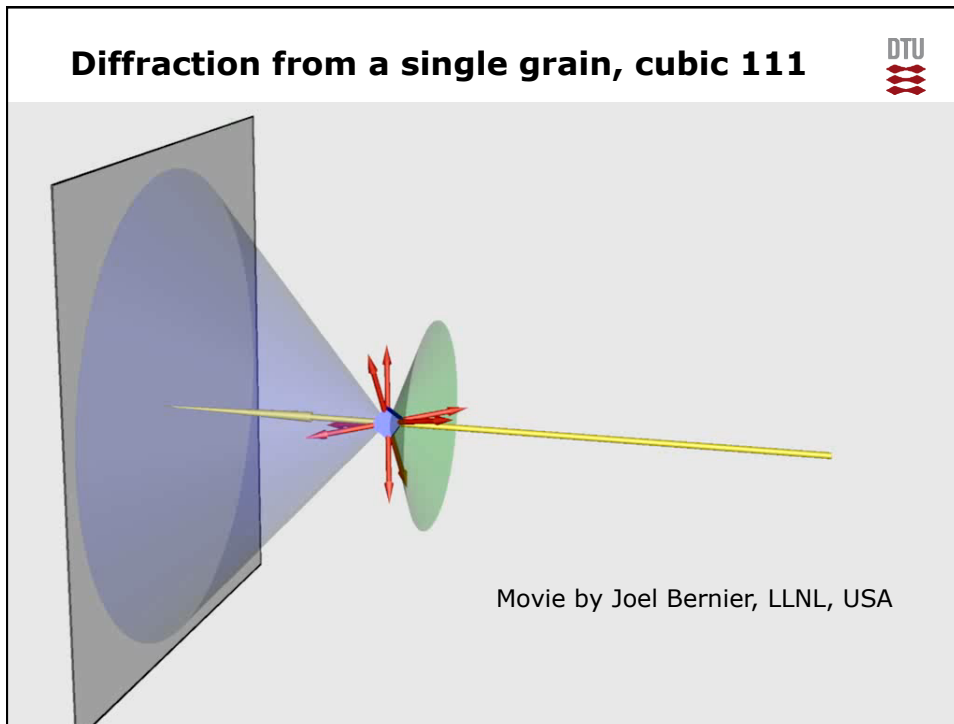

**DTU**

## 3DXRD setup

Near-field  
 ~10 mm

Far-field  
 20-50 cm

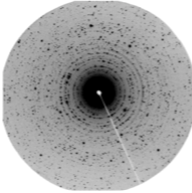

10 **Risø DTU, Technical University of Denmark**
Jette Oddershede jeto@fysik.dtu.dk 22-aug-2012

**DTU**

## Limitations

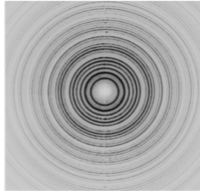

- Mapping a representative volume
- Larger deformations

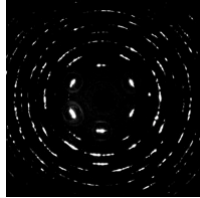

100 grains

Undeformed

10,000 grains

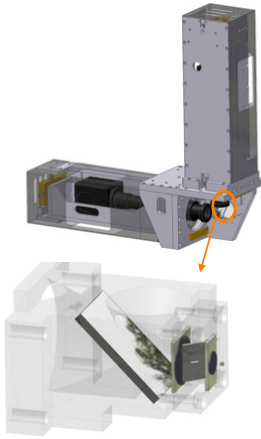

6% deformed

13 **Risø DTU, Technical University of Denmark** Jette Oddershede jeto@fysik.dtu.dk 22-aug-2012

**DTU**

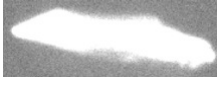

## 3D detector for deformed samples

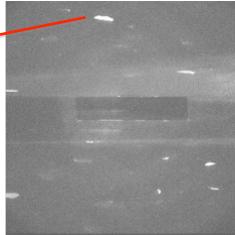

4.5  $\mu\text{m}$  pixel size

1.5  $\mu\text{m}$  pixel size

2. Screen (15 mm)

1. Screen (5 mm)

## 3DXRD DATA ANALYSIS

15 Risø DTU, Technical University of Denmark

Jette Oddershede jeto@fysik.dtu.dk 22-aug-2012

## Data analysis Software

- FABLE: Fully Automatic BeamLines and Experiments
- Open source software for analysis of 3DXRD data
- <http://sourceforge.net/apps/trac/fable/wiki>
- ~10 developers/contributors:
  - Risø DTU
  - ESRF
  - APS
  - Lawrence Livermore
  - TU Delft

16 Risø DTU, Technical University of Denmark

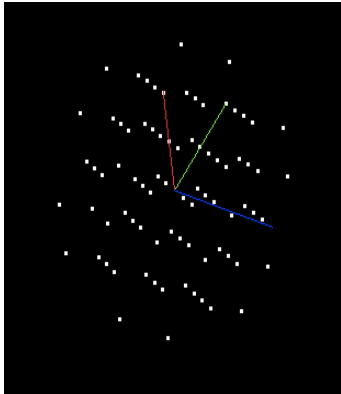

Jette Oddershede jeto@fysik.dtu.dk 22-aug-2012

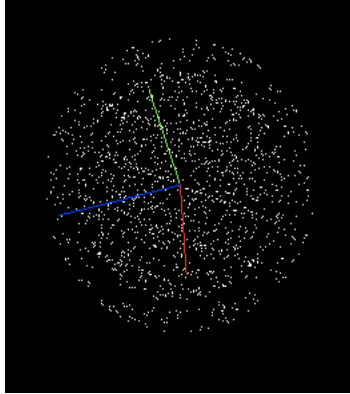

## Data analysis Identifying grains

Indexing: Identifying **copies of the set of theoretical reflections** in the polycrystalline dataset.

Rotations

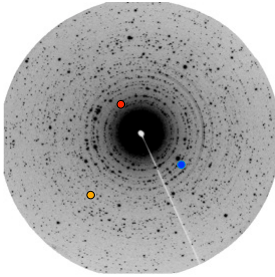

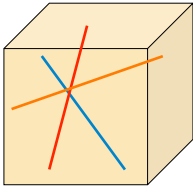

17 **Riso DTU, Technical University of Denmark** Jette Oddershede jeto@fysik.dtu.dk 22-aug-2012

## Data analysis GrainSpotter

Trick:  
Straight lines in  
Rodrigues space

**Spots:**  
Filter bad spots away

**Indexing:**  
Find vertices in Rodrigues  
(orientation) space

**Integrated intensities:**  
Determine grain volumes

**Result of simulations:**  
Find 700 out of 700 grains  
within 30 sec

S. Schmidt, in work

**DTU**

## Data analysis Refining grain properties

- Position
- Orientation
- Strain
- Volume
- Morphology or shape
- Phase or crystal structure

And most importantly:  
How these **evolve**  
during the *in situ*  
experiment!

19 **Risø DTU, Technical University of Denmark** Jette Oddershede jeto@fysik.dtu.dk 22-aug-2012

**DTU**

## Experiment design

Time resolution

Statistics

Spatial resolution

Grain shapes

Many grains

Evolution rates

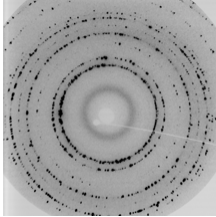

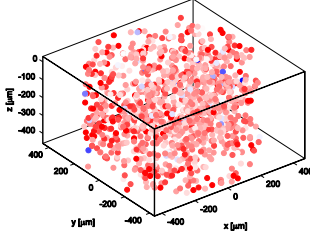

You cannot have it all ☹️

20 **Risø DTU, Technical University of Denmark** Jette Oddershede jeto@fysik.dtu.dk 22-aug-2012

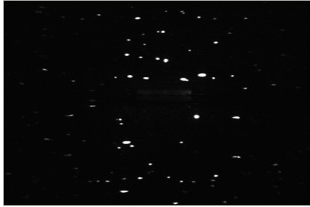

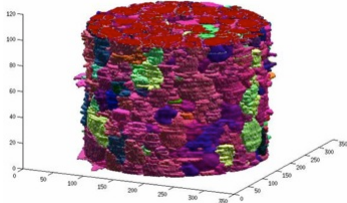

## Experiment design

- Grain averaged data
  - Time resolution
  - Farfield

→

- Voxellated data
  - Spatial resolution
  - Nearfield

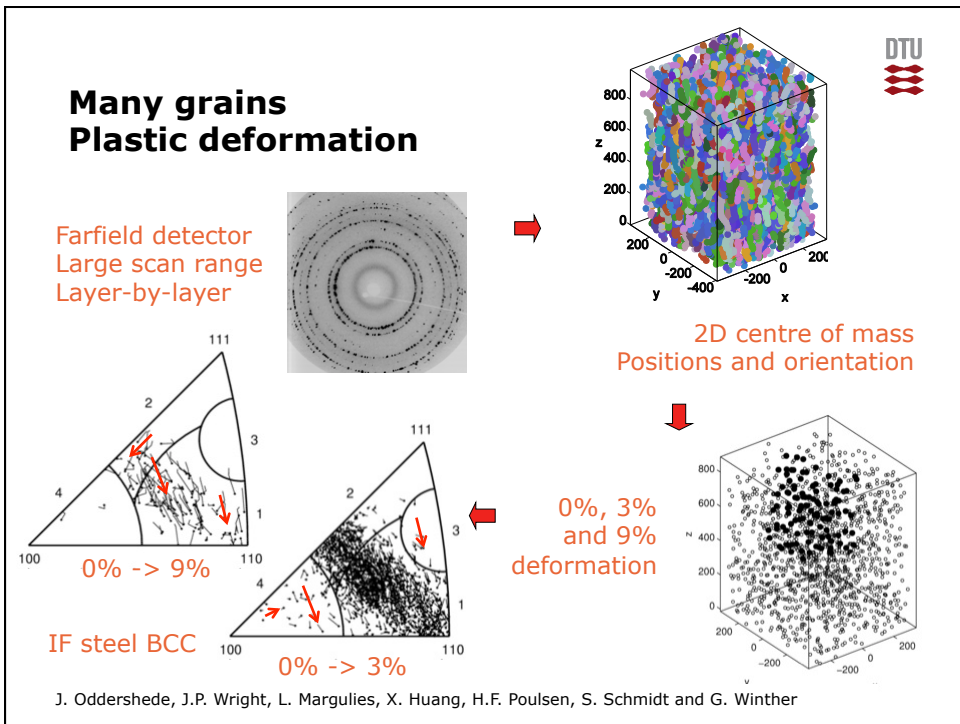

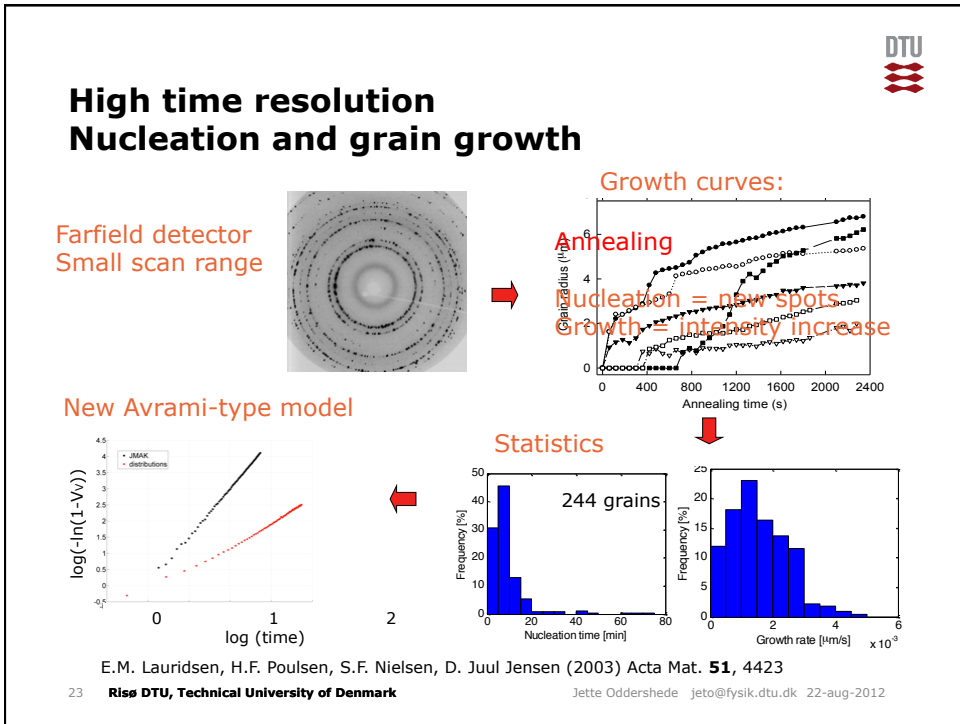

→

21 **Risø DTU, Technical University of Denmark**
Jette Oddershede jeto@fysik.dtu.dk 22-aug-2012

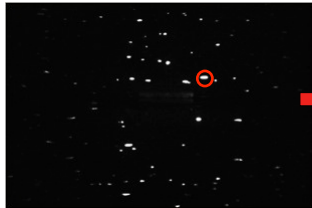

## EXAMPLES

22 **Risø DTU, Technical University of Denmark**
Jette Oddershede jeto@fysik.dtu.dk 22-aug-2012

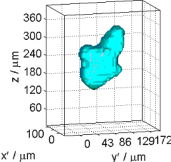

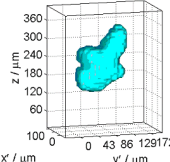

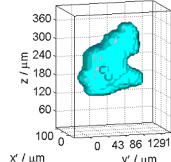

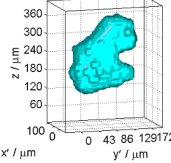

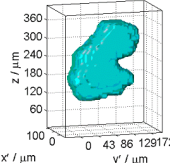

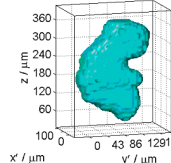

## High spatial and time resolution Recrystallization of 42% deformed pure Al

Snapshot 20      Snapshot 30      Snapshot 50

Heterogeneous growth with protrusions

Nearfield, one reflection  
 Total annealing time at  $\sim 300^\circ\text{C}$ : 30 h  
 50 layers of  $6\ \mu\text{m}$   
 Shape resolution:  $5\ \mu\text{m}$   
 Time resolution: 10 min

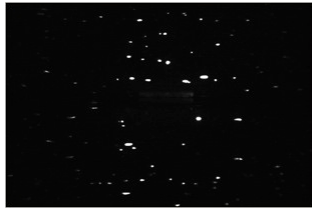

-----

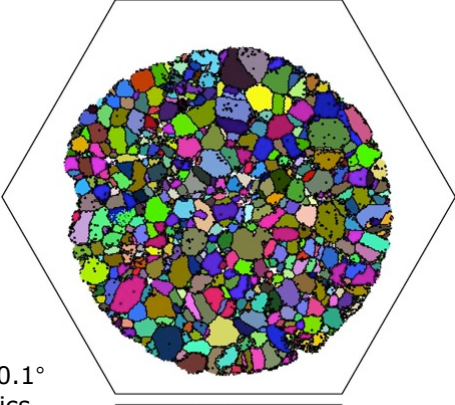

S. Schmidt, S. F. Nielsen, C. Gundlach, L. Margulies, X. Huang, D. Juul Jensen (2004) *Science* **305**, 229.

25 **Risø DTU, Technical University of Denmark** Jette Oddershede jeto@fysik.dtu.dk 22-aug-2012

## High spatial resolution, many grains Ni, undeformed

Nearfield, large scan range

9 layers, 1101 grains  
 Resolution:  $5\ \mu\text{m}$  and  $0.1^\circ$   
 Grain boundary statistics

720 microns

**DTU**

## Bridging grain averaged and voxellated data Laguerre tessellation

- Method to get approximate 3D grain map from centre of mass positions and relative grain volumes

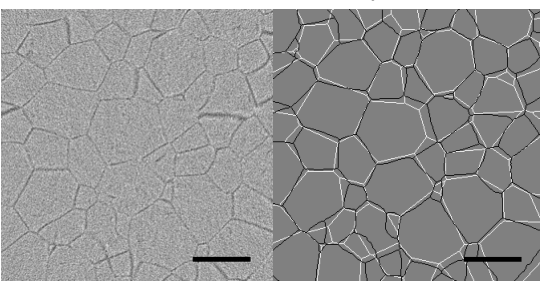

27 Riso DTU, Technical University of Denmark Jette Oddershede jeto@fysik.dtu.dk 22-aug-2012

**DTU**

## Bridging grain averaged and voxellated data Laguerre tessellation

- Method to get approximate 3D grain map from centre of mass positions and relative grain volumes
- Test on positions, volumes and grain shapes from from microtomography on meta-stable beta-titanium alloy

	10 μm
% Correct labelled voxels	78.25
% grains with all neighbours correct	10.15
# erroneously extra neighbours/grain	1.23
# erroneously missing neighbours/grain	1.24
# total of wrong neighbours/grain	2.47

## Where can these experiments be performed? Dedicated 3DXRD setups

- ID11, ESRF, Grenoble, France
- 1-ID, APS, Chicago, USA
- HEMS, Petra-III, Hamburg, Germany
  - From 2013
- Spring-8, Japan

29 **Riso DTU, Technical University of Denmark** Jette Oddershede jeto@fysik.dtu.dk 22-aug-2012

## Summary

- Penetration power to **non-destructively** probe **bulk structures**
- Probing volume large enough to obtain grain **statistics**
- Sufficient time resolution to follow typical processes ***in situ***
- Depending on setup a number of the following can be probed: grain **position, morphology, phase, orientation, elastic strain**

30 **Riso DTU, Technical University of Denmark** Jette Oddershede jeto@fysik.dtu.dk 22-aug-2012

## Take home messages

- Application examples
  - The potentials of 3DXRD
  - Inspiration
- Don't be afraid to try new techniques!
- Experiment design
  - Define exactly what information you want to gain from the experiment
  - Realise that you will probably have to prioritise between **spatial resolution**, **time resolution** and the **number of grains**
  - Discuss with beam line scientist prior to applying for beamtime
