POWDER DIFFRACTION

Principles

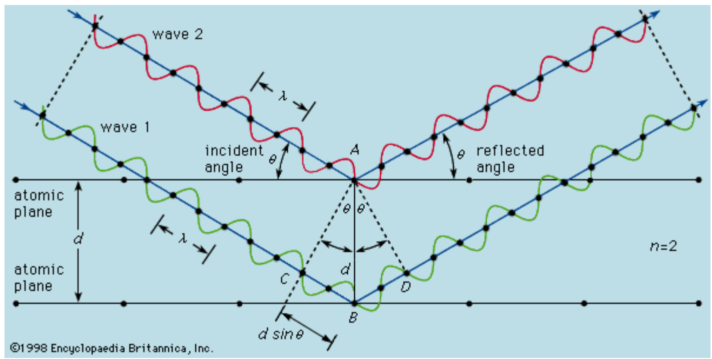
Kenny Ståhl

DTU Chemistry

CONTENTS

- Diffraction viewed as Bragg's law.
- Single-multi-crystal view
- Crystals - Diffraction planes - Miller indices
- Reciprocal space – reciprocal unit cell
- Ewald construction, monochromatic - single-crystal – powder
- Ewald construction, white/pink radiation – single-crystal – powder
- Reciprocal lattice points – the interference function

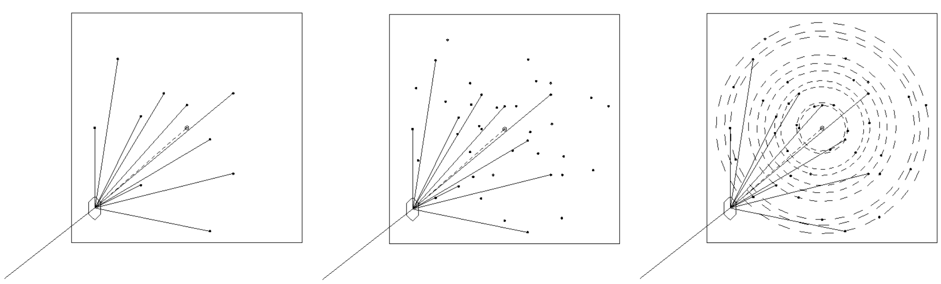
BRAGG'S LAW



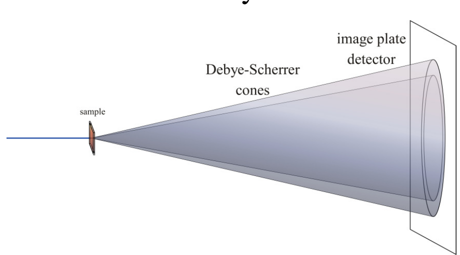
$$2\ d_{hkl}\ \sin\theta_{hkl} = n\ \lambda$$

(Geometric interpretation of diffraction)

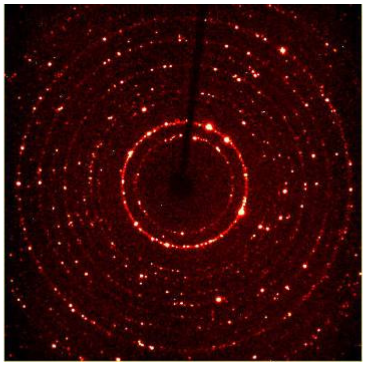
SINGLE- VS. MULTI-CRYSTAL DIFFACTION

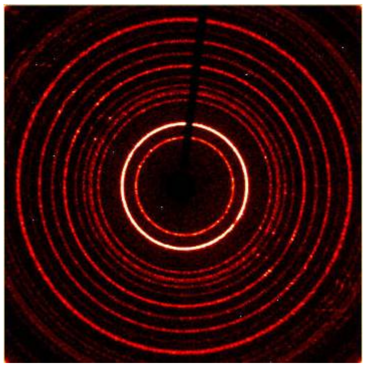


One crystal | Four crystals | Powder



POWDER DIFFRACTION





CRYSTAL PLANES – MILLER INDICES

h=1, k=1

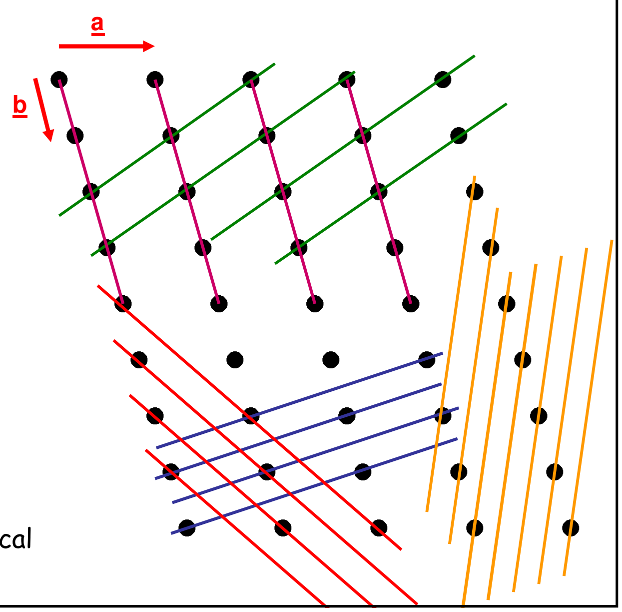
h=1, k=0

h=1, k=2

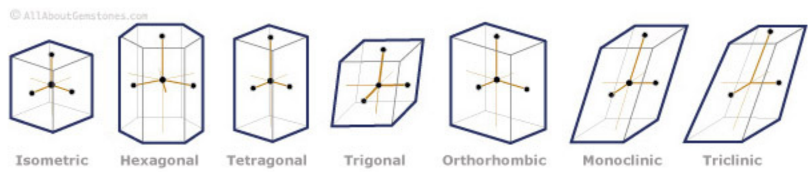
h=4, k=1

h=2, k=-1

Note that the 2, 2 and
-2, -2 planes are identical



CRYSTAL PLANES – d-VALUES

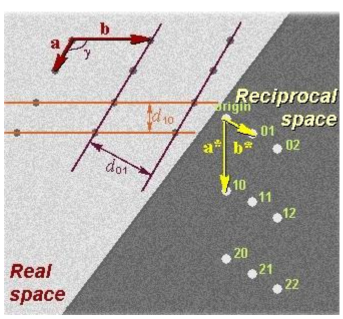


a b c (Å) α β γ (°)

$$1/d^2_{hkl} = [h^2\sin^2\alpha/ a^2 + k^2\sin^2\beta/ b^2 + l^2\sin^2\gamma/ c^2 + 2kl(\cos\beta\cos\gamma-\cos\alpha)/(bc) + 2hl(\cos\alpha\cos\gamma-\cos\beta)/(ac) + 2hk(\cos\alpha\cos\beta-\cos\gamma)/(ab)] / [1-\cos^2\alpha-\cos^2\beta-\cos^2\gamma+2\cos\alpha\cos\beta\cos\gamma]$$

$$1/d^2_{hkl} = (h^2 + k^2 + l^2) / a^2$$

RECIPROCAL SPACE



a^* = b ¤ c / V_{cell} (= b c sinα / V_{cell})

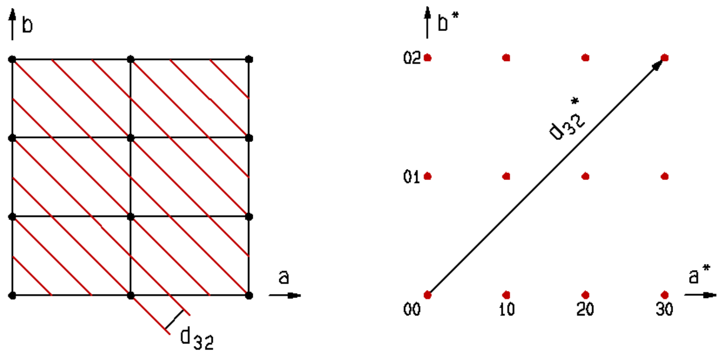
b^* = a ¤ c / V_{cell} (= a c sinβ / V_{cell})

c^* = a ¤ b / V_{cell} (= a b sinγ / V_{cell})

$a \cdot a^* = 1 \quad a \cdot b^* = 0$

$d_{hkl} = 1 / d_{hkl}^*$

RECIPROCAL SPACE



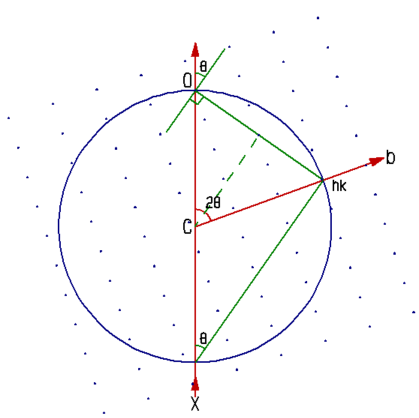
Direct space

Reciprocal space

$d_{32} = 1 / d_{32}^*$

EWALD CONSTRUCTION

Single-crystal, monochromatic radiation



$R = 1 / \lambda$

$R * \sin\theta = r_{hk} / 2$

$r_{hk} = d_{hk}^* = 1 / d_{hk}$

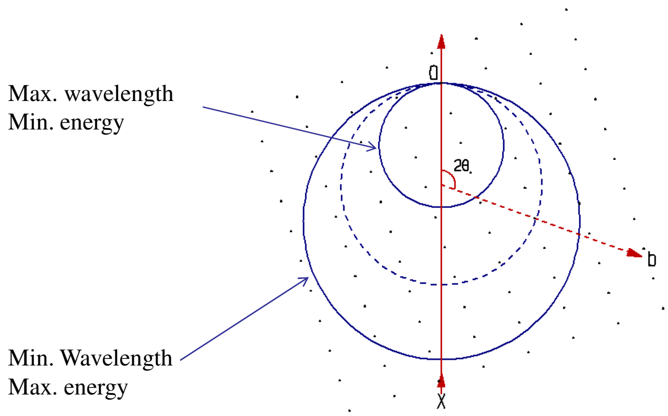
$2 d_{hk} \sin \theta_{hk} = \lambda$

Reflections within a radius of 2R can be observed

http://www.doitpoms.ac.uk/tlplib/reciprocal_lattice/ewald.php

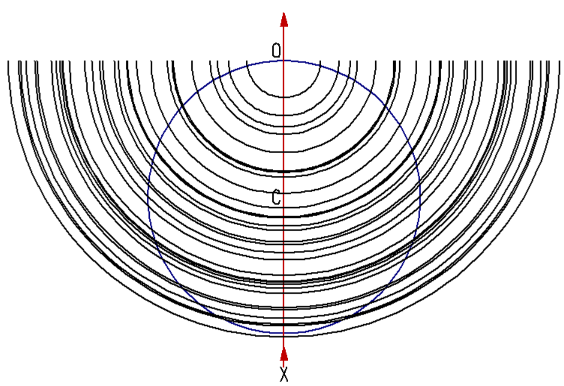
SINGLE-CRYSTAL LAUE DIFFRACTION

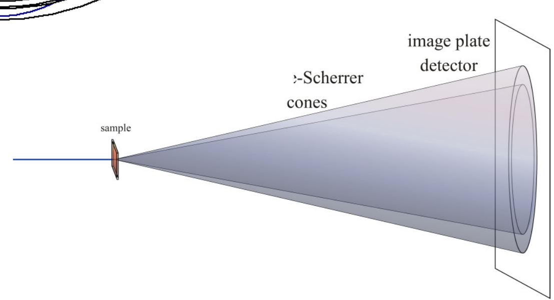
Single-crystal, white or ”pink” radiation



All reflections between the two Ewald spheres can be observed.

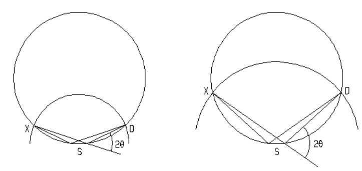
POWDER DIFFRACTION



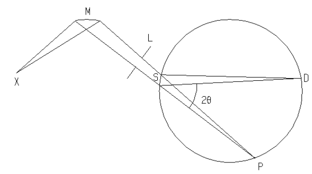


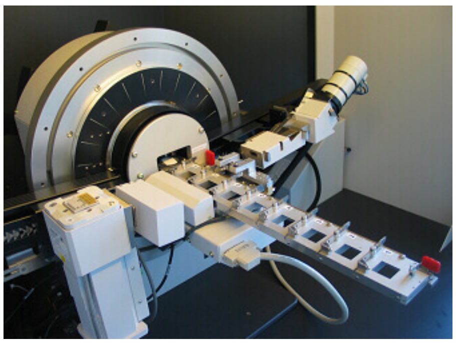
POWDER DATA COLLECTION

Bragg-Brentano (reflection mode)

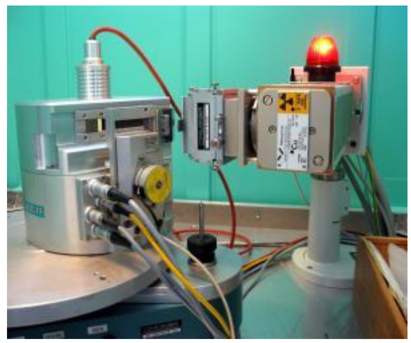


Guinier (transmission mode)





Bruker D8 Advance

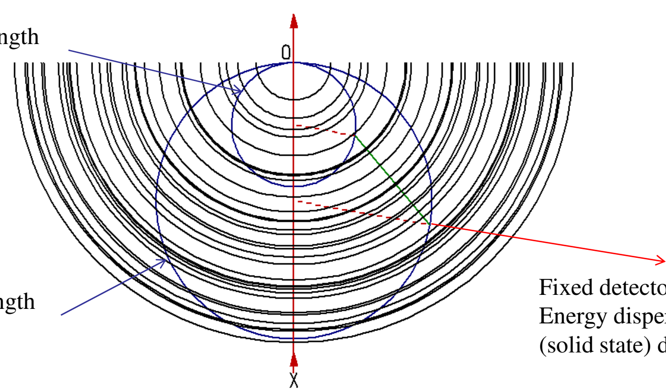


Huber G670

ENERGY DISPERSIVE POWDER DIFFRACTION

Powder, white or ”pink” radiation

Max. wavelength
Min. energy



Min. wavelength
Max. energy

Fixed detector angle
Energy dispersive
(solid state) detector

Reflections crossing the green line can be observed

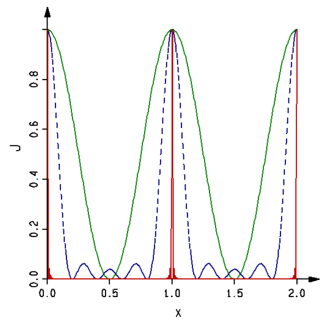
INTERFERNCE FUNCTION

$$\mathbf{f}_j = f_j \exp\{2\pi i(\mathbf{r} + \mathbf{v}) \cdot \mathbf{r}^*\}$$

$$\mathbf{v} = n_1\mathbf{a} + n_2\mathbf{b} + n_3\mathbf{c}$$

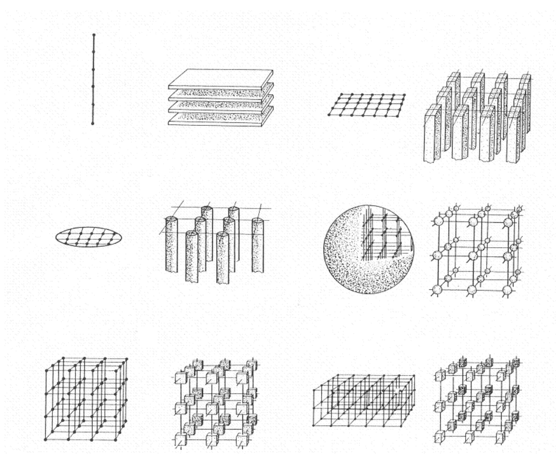
$$\mathbf{F}_{cryst} = \Sigma_{cryst}\exp\{2\pi i\ \mathbf{v} \cdot \mathbf{r}^*\} \cdot \mathbf{F}_{hkl} = J(\mathbf{r}^*) \cdot \mathbf{F}_{hkl}$$

$$\Sigma_{N1} \exp\{2\pi i\ n_1\mathbf{a} \cdot \mathbf{r}^*\} = (1 - \exp\{2\pi i\ N_1\mathbf{a} \cdot \mathbf{r}^*\}) / (1 - \exp\{2\pi i\ \mathbf{a} \cdot \mathbf{r}^*\}) = \sin\{\pi\ N_1\mathbf{a} \cdot \mathbf{r}^*\} / \sin\{\pi\ \mathbf{a} \cdot \mathbf{r}^*\}$$

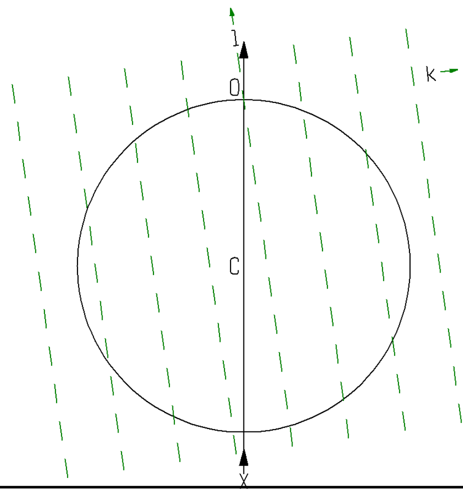


$$\sin^2\{\pi\ N_1 x\} / \sin^2\{\pi\ x\}$$

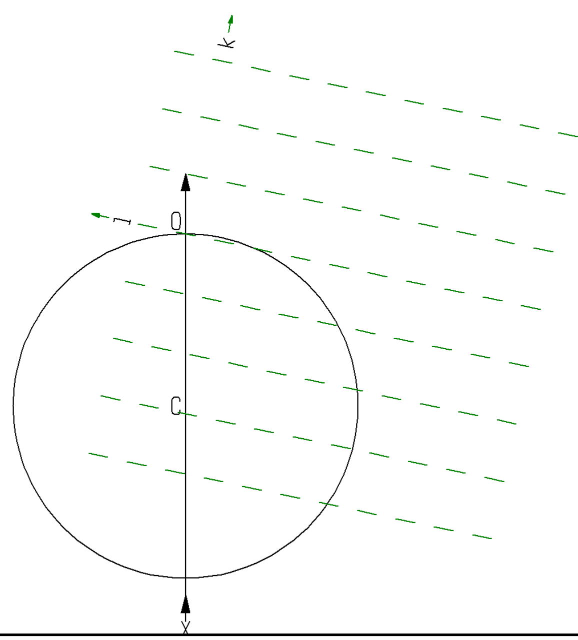
INTERFERENCE FUNCTION



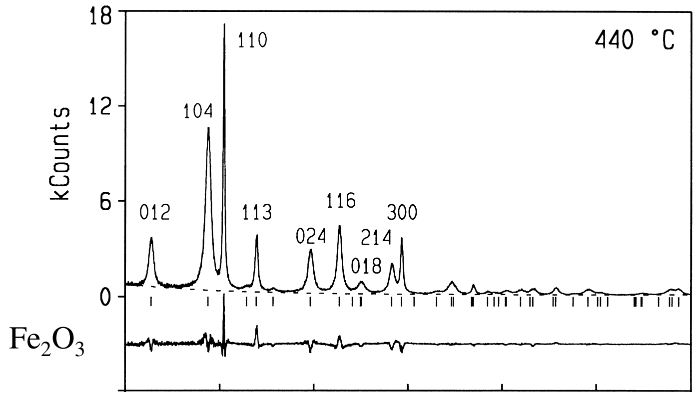
ANISOTROPIC SIZE EFFECTS



ANISOTROPIC SIZE EFFECTS



ANISOTROPIC SIZE EFFECTS



a = 5.0364(8), c = 13.750(2) Å   D(a) = 399(3) Å, D(c) = 87(2) Å
