

Black Holes and Applied Holography

Contribution ID: 7

Type: **not specified**

Examples of non-AdS Holography

Friday 16 November 2012 15:30 (50 minutes)

Mini introductory course on holography for space-times that are no longer asymptotically AdS but instead for example conformally AdS, Lifshitz or Schroedinger. Such cases are interesting for potential applications to condensed matter theory, black hole physics (Kerr/CFT, subtracted geometry) and for generalizing our notions of holography.

Presenter: HARTONG, Jelle
