# Accessing eduroam with Windows 7

To configure and access the wireless eduroam network using Windows 7 your computer must meet the following requirements. Your operating system must be fully updated. Your computer must have a wireless network adapter. Finally your computer must be within range of an eduroam access point.
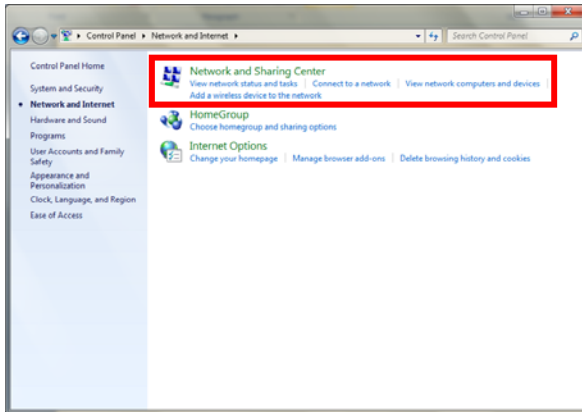

Open **start-menu** in bottom left hand corner of your screen.
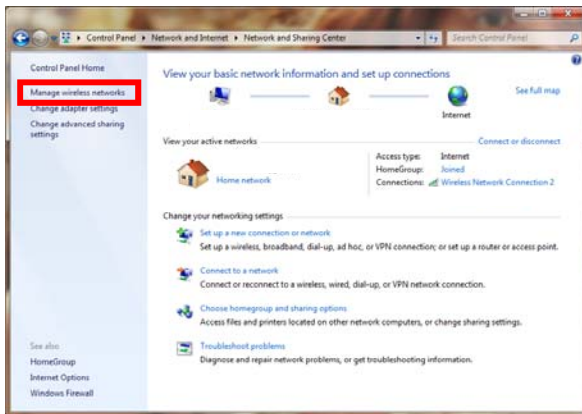

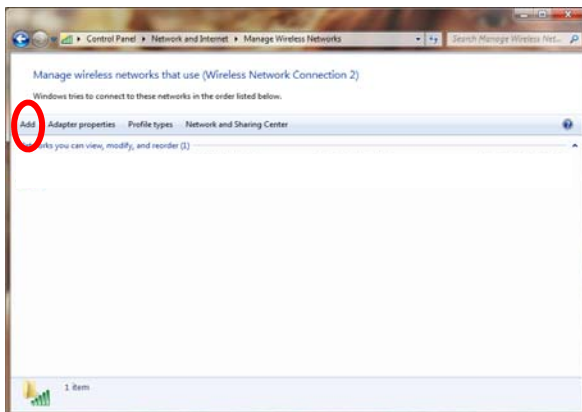

Choose **Control Panel**.
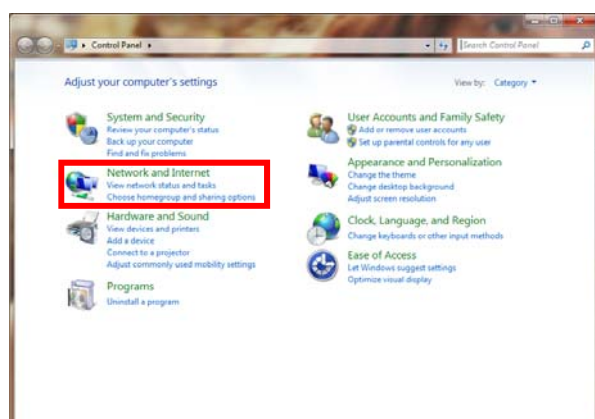

Open **Network and Internet**.
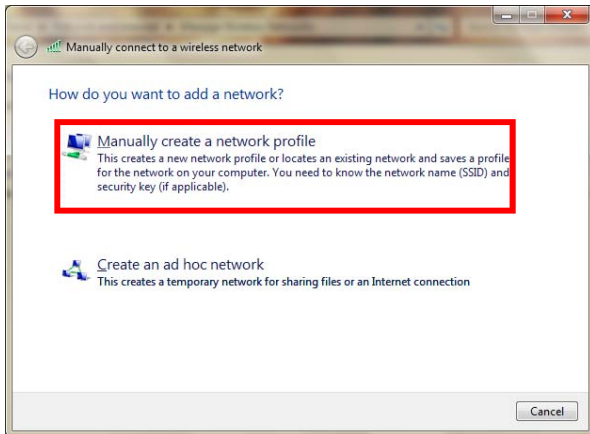

Open **Network and Sharing Center**.

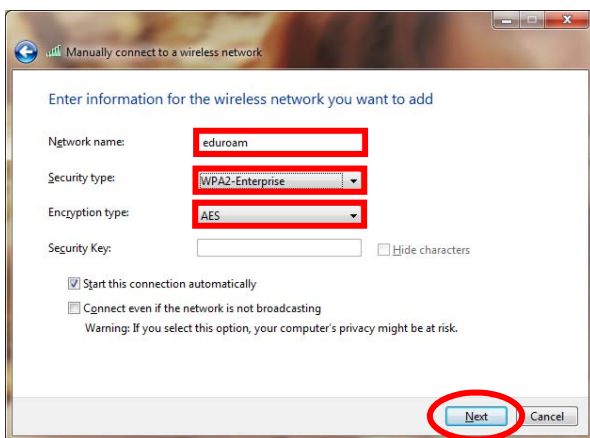

Open **Manage wireless networks**.

You now get an overview showing your network connections.

Click **Add**.

**Remove any prior network install-
ment of Eduroam or it won't work.**

Choose **Manually create a network profile**.

At **Network name** type **eduroam**.
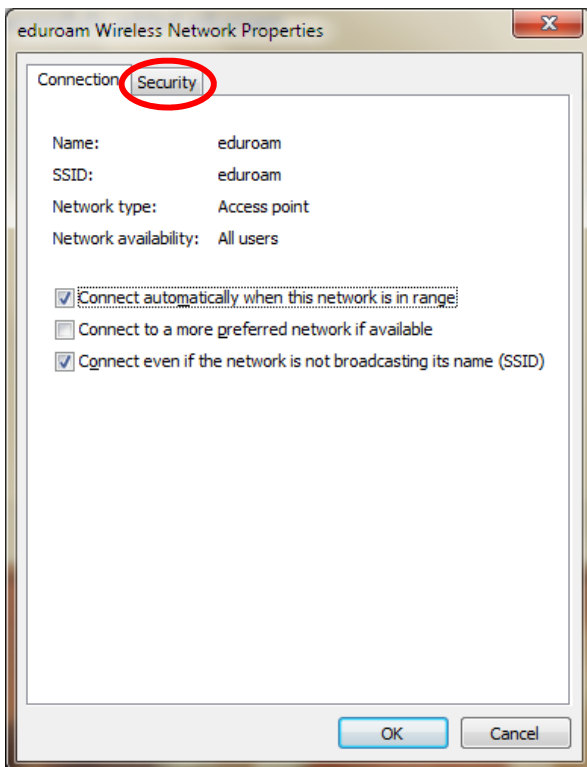

At **Security type** set **WPA2-Enterprise**.

At **Encryption type** set **AES**.

Check **Connect even if this network is not broadcasting**.

Click **Next**.

Choose **Change connection settings**.
Click the **Security**-tab.

Check **Validate server certificate**

At **Connect to these servers** type **radius.ku.dk**

At **Trusted Root Certification Authority** check **Equifax Secure Certificate Authority**.
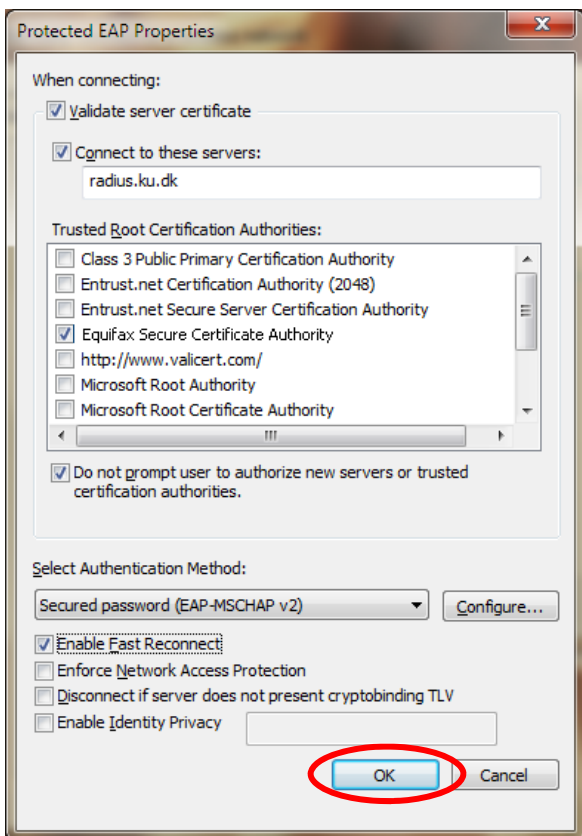

Check **Do not prompt user...**

Now click **Configure** at **Select Authentication Method: Secured password (EAP-MSCHAP v2)**.
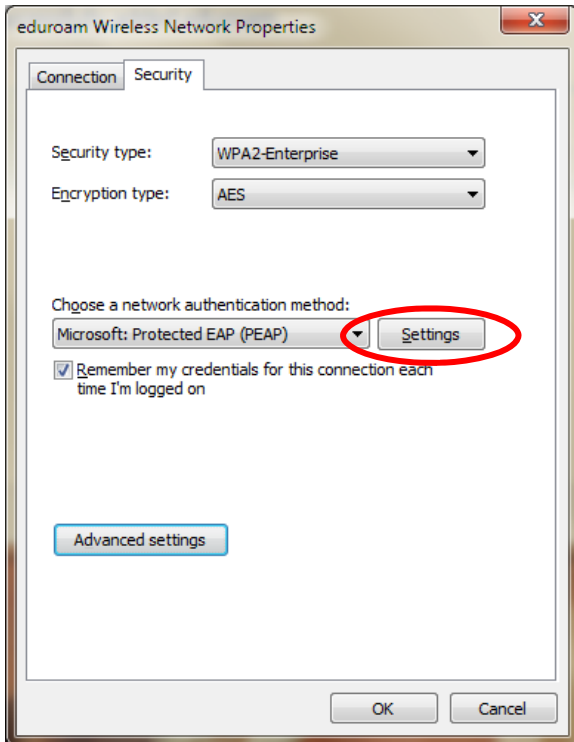

Make sure that **Automatically use my Windows logon**… is left **unchecked**.
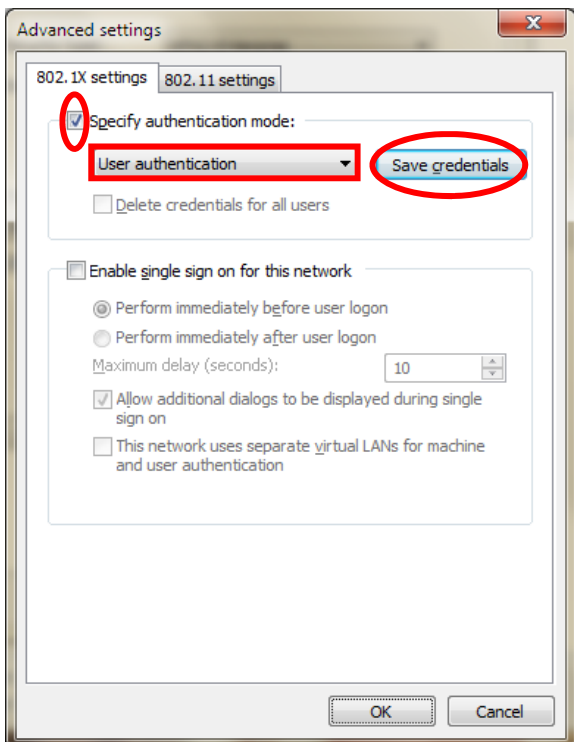

Click **Ok**.

Click **Ok**.

Click **Settings**.

Check **Specify authentication mode**.

Set **User authentication**.

Click **Save credentials**.

Type in your **UCPH Username follo-wed by @ku.dk** and **Password.**
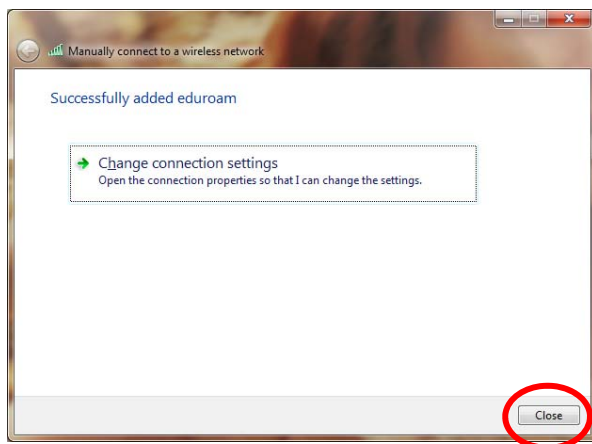

Click **Ok**.

Click **Ok.**

Click **Ok**.

Choose **Close**.

Your computer will now automatically access the **eduroam** network when in range.

You now have access to the wireless eduroam network. To test your connectivity go to **www.ku.dk**

FAQ

When you logon to eduroam, you have to type in your password in 30 seconds. This is a security meassure. If it happens then turn of your internet connection and try again.

Each faculty at KU only have a certain amount of IP-adresses available for eduroam connection. This may result in an error at logon. This problem can only be solve by your local faculty IT-department.

Finally it is important to notice that your password expires every three month. When you change it you have to reconfigure the eduroam network to avoid problems.
