Outline

- 1 Submillimeter Galaxies
- 2 Method: Spectral Energy Distribution (SED) Fitting
- 3 Results
 - Properties of SMGs
 - Dust heating mechanism
 - Open questions

Submillimeter Galaxies (SMGs)

(Chapman et al., ApJ, 2004, 611, 732)

- Selected at submm ($850 \mu\text{m}$)
- $z = 1.7 - 2.8$ (Chapman et al., 2005, ApJ, 622, 772)
- Luminous, massive, dusty galaxies
- Studies based on small ($\lesssim 20$) samples, photometric redshifts, limited wavelength coverage

Submillimeter Galaxies (SMGs)

(Chapman et al., ApJ, 2004, 611, 732)

- Selected at submm (850 μm)
- $z = 1.7 - 2.8$ (Chapman et al., 2005, ApJ, 622, 772)
- Luminous, massive, dusty galaxies
- Studies based on small ($\lesssim 20$) samples, photometric redshifts, limited wavelength coverage

Submillimeter Galaxies (SMGs)

(Chapman et al., ApJ, 2004, 611, 732)

- Selected at submm (850 μm)
- $z = 1.7 - 2.8$ (Chapman et al., 2005, ApJ, 622, 772)
- Luminous, massive, dusty galaxies

Submillimeter Galaxies (SMGs)

(Chapman et al., ApJ, 2004, 611, 732)

- Selected at submm ($850 \mu\text{m}$)
- $z = 1.7 - 2.8$ (Chapman et al., 2005, ApJ, 622, 772)
- Luminous, massive, dusty galaxies
- Studies based on small ($\lesssim 20$) samples, photometric redshifts, limited wavelength coverage

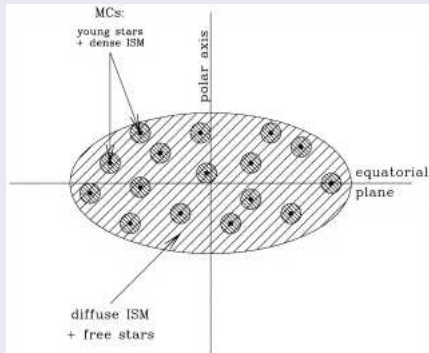

GRASIL

 (Silva et al. 1998, ApJ, 509, 103)

The Model

- Self-consistent and evolutionary model of galaxy SED based on radiative transfer
- Stellar population born in MCs + dust
- GRaphite & SILicate or GRANato & SILva

Galaxy Geometry

Spectral Energy Distribution Fitting of SMGs

Properties of SMGs

$$M_{H_2} / M_d = 54^{+14}_{-11} \text{ (Kovács et al., ApJ, 2006, 650, 592)}$$

Temperature vs. luminosity (Michałowski et al., ApJ, 2008, 672, 817)

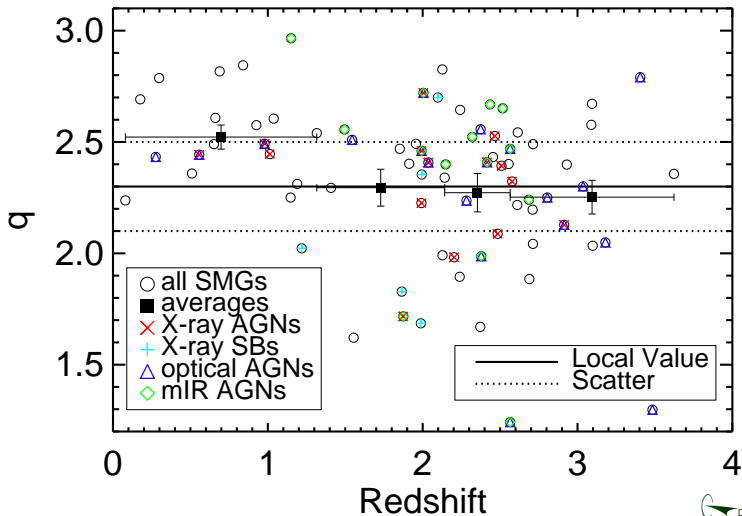

Selection effects (Chapman et al., 2005, ApJ, 622, 772)

FIR-Radio Correlation of SMGs

FIR-Radio Correlation of SMGs

Open questions

- SMG sample
 - **Observations:** Remaining 50% of the sample — different dust properties?
 - **Theory:** Selection effects — dust emission characteristics
- Emissivity index β
 - **Observations:** broader wavelength coverage to determine β
 - **Theory:** What does β tell us about dust properties?
 - **Theory:** β of silicate and graphite grains, influence of β on T_d and M_d
- Formation of dust and stars
 - **Theory:** timescales of star and dust formation (50 Myr?)
 - **Theory:** dust destruction? (massive SMGs have less dust per unit stellar mass)
